The following is an examiner's statement of reasons for allowance: In regard to claim 1, Troska (US 5728415) teaches a device for locating an item packaged in a container comprising an elongated flexible tether 60 extractably loaded upon a dispenser 50 and Newman (US 4120401) teaches a device including an elongated flexible tether 32 extractably loaded upon a dispenser. The difference is that neither Troska or Newman teaches the dispenser comprising a stratified body having a bottom adhesive layer and a top layer and there is no suggestion to modify the devices of Troska or Newman to have such structure in the art of record. As to claim 11, Nelson et al. (US 5989093) teach a tethering device comprising a tether 42 extractably stored in a dispenser 12 wherein a pad 14 having an attachment eyelet in the form of slot 20 for securement of the tether and adhesive is attached to the tab, and Mango (US 3746285) teaches an extractable tethering device comprising a tether 18 extractably stored in a dispenser 17 wherein a threaded cap 23 comprising a fastener has an attachment eye for attachment to the tether. The difference is that neither Nelson et al. nor Mango teaches the tether and fastener formed integrally from a layer of elastomeric material and there is no suggestion to modify the devices of Nelson et al. or Mango to have such structure in the art of record. In regard to claim 27, Tinkey (US 3217955) teaches a tethering device comprising a dispenser 10 and a tether in the form of tape 24 that is inherently subdividable to form subtethers. The difference is that Tinkey does not teach the dispenser comprising a stratified body having top layer and a bottom layer and there is no suggestion to modify the device of Tinkey to have such structure in the art of record.
